

# AI Integration Developer

Part-Time Contractor · Remote · North America Timezone Preferred

 **Build. Ship. Impact.**

A lean AI platform going live for real clients in weeks.

**Apply: [gurgill@costek.ca](mailto:gurgill@costek.ca)**

## THE OPPORTUNITY

Costek is a Canadian consulting firm launching a **proprietary white-label AI services platform** for business clients across North America. The platform foundation is already in place. We are looking for a **sharp, experienced contractor** to build the custom integrations, document automation engine, and client portal layer that will take us to launch.

This is not a research project — we have paying clients waiting. Your work ships into production within weeks, not months. If you want a role where your code **creates real business outcomes fast**, read on.

*We will share full platform architecture details and tooling specifics during the interview stage. This posting focuses on the skills and mindset we need.*

## WHAT YOU WILL BUILD

### Integration Layer

- Verify, test, and harden billing & usage workflows between our SaaS platform and Stripe
- Build webhook-based compliance logging to an external datastore
- Troubleshoot and optimize third-party API connections within the platform

### Document Export Engine

- Build a Node.js endpoint that reads AI-generated content via REST API and exports to branded .docx and .pdf
- Inject client logo, headers, and footers into exported files programmatically
- Host on a lightweight cloud platform (Railway / Render)

### Portal QA & Polish

- Embed Stripe Customer Portal within white-label client portal
- QA the full client self-onboarding journey end-to-end as a non-technical user
- Identify and resolve friction before controlled client launch

## SKILLS & MINDSET

### TECHNICAL — MUST HAVE

- Strong experience with an enterprise-grade white-label SaaS platform in a reseller / SaaS Mode context — you will be tested on this at interview
- Node.js — REST APIs, npm ecosystem, lightweight cloud-hosted microservices
- REST API consumption — reading and writing records, triggering platform actions
- Programmatic Word document generation (e.g. docx npm library or equivalent)
- Stripe API — Customer Portal embedding, webhook verification

### NICE TO HAVE

### THE PROFILE WE ARE HIRING FOR

*We are a small, trust-based team. The right skills open the door — the right character keeps you here.*

- Calm under ambiguity — you ask one smart question instead of ten nervous ones
- Ownership mentality — you flag blockers early and bring solutions, not just problems
- Curious & self-learning — when the platform releases a new capability, you explore it without being asked
- Reliable & async-first — concise written communication, meets deadlines without hand-holding
- Collaborative, low-ego energy — you make the project smarter, not just the code
- Innovative instinct — you find the simpler path before defaulting to the complex one

- Puppeteer or headless Chrome for PDF generation
- Familiarity with Canadian regulatory context (CRTC, PIPEDA)
- Railway.app or Render.com deployment experience
- Voice AI or conversational AI platform integration experience

**⚠ If you have never configured a white-label SaaS reseller environment in production, this role is not the right fit. We need real depth.**

## LOGISTICS & HOW TO APPLY

 Engagement  
**6–8 Weeks, PT**

 Budget  
**Hourly or Fixed / Phase**  
Quote with breakdown

 Location  
**Fully Remote**  
N. America TZ preferred

 Start  
**Immediate**

To apply, email [gurgill@costek.ca](mailto:gurgill@costek.ca) with subject line: **“AI Dev — [Your Name]”**

- Portfolio or case study demonstrating white-label SaaS platform configuration — including reseller / SaaS mode setup (mandatory to be considered)
- Brief description of the most complex API integration or automation workflow you have built and deployed in production
- Your preferred engagement model: hourly rate OR fixed price per phase with clear deliverables
- Your weekly availability and earliest start date

*Shortlisted candidates will receive a full technical brief under NDA prior to any paid work commencing.*
